## Trolling lure depth guide chart 2020 2021 printable

Best bait for gt. Best bait for callop. Best bait for trevally

The keys to finding Walleye are their relation to the structure of the lake, what types of cover they use, and how water temperature and light conditions affect their feeding habits. Fishing Structure is the primary factor in finding Walleye. That is what the lead barb and long shank is molded for on all the popular jigs you see. Identifying cover and structure is critical for learning how to catch Walleye. Check our our post here for more information on Fishing Cover vs. Walleye's love Points because they sport multiple depth irregularities around a small area. Casting into a ball of bait with a tail thumping shad will work well, but I haven't had much luck with them outside of deep Summer and the Fall Mayfly Hatch when Baitfish are flourishing. Without Swivels your rigs tangle with your main line, losing you fish. The famous Red Lake fishery won't get deeper than 15 Ft. and hold trophies, while at the same time Walleyes are feasting on Smelt in depths of 50-60 Ft. in the Great Lakes. Structure. DepthAlmost everyone who fishes Walleye in your local area will talk about what depths they are producing fish. You will get snagged sometimes, but this is a greatly reduced occurrence compared to a regular Split Shot. The general rule of thumb for Paddle Tail Shads is to match-the-hatch so stick with natural colors like Pearl, Shad, Smelt etc. Walleye Hooks & Sinkers Your going to need a good mix of Hooks and Sinkers for your Slip Bobber Rig, and to adjust your Live Bait and Spinner Rigs accordingly. How hard can it be to update the data in the app with the information you have already collected? Unfortunately for the consumer, this is the only game in town for this sort of information due to some ridiculously broad and vague patent that should never have been granted. It isn'tas simple as downloading an app andinstantly understanding the dynamics of trolling. finding them in the deeper expanses during a sunny afternoon. All this being said, when you need information for a crankbait/ line combination already in the app, it does a great job. See MoreSee Less I am a bit upset that the lifetime purchase doesn't even include all the crankbaits that I have in my precision trolling 7th edition book (more than a dozen are missing including ones I use). On the 6' ML Combo, I spool the whole reel with 12 Lb. Fluorocarbon. However, you can simply troll behind your boat about a 50-100 yards back and still find success. We have more advanced information on Fishing Line if you want to dive deeper. How to Catch Walleye on Live Bait is the key to bountiful Walleye trips. However, more finesse tactics like jigging and rigging live bait are best served under a Medium Light power rod. Go for the smallest you can, a #12 Snap Swivel will do the trick. Once you figure out how to catch a few Walleye, you will greatly appreciate the challenge. As Summer approaches in July, the Baitfish population ramps up to a surplus as water temps rise and Walleye move deep in search of their ideal temperature range. The first three are the most typical. This is where you will see many boats aligned on Points, spreading out from the shallows to the drop offs. 45-65 Degrees is the typical range for Spring, you should target the warmest areas of the lake. Most Rigs come pre-tied with gunsmoke or bronze colored hooks, if your using minnows or leeches it may be worth the effort to replace them with Red Octopus Hooks. Baitholder Hooks Bronze Baitholder hooks are a classic and work well when using Nightcrawlers. Spinners are a flashy way to cover a lot of water, I have found them effective during the warm summer months on Mud Flats or Sunken Reefs when Walleye are spread out across mid-lake. Best Walleye Lures Such as Crankbaits and Soft Plastics are a staple among the Walleye elite. Walleye seek deeper water during the day and feed shallow at night. Post Spawn however, is the most effective time to target Walleye. These are Walleye specialized jig heads that have no lead barb on the base of the jig and the hook shank is short with a wide gap. I really like natural colors like Black, White and Brown. Trolling involves running your lure or rig roughly 50-100 yards behind the boat at low speeds, preferably with a Trolling Motor. Grubs in the 3-4" range should be paired with 1/4 or 1/8 Oz. Barbed Jigs. These rigs need to be drifted along the bottom at a gradual pace, ideally the drift is provided by natural waves + wind (Walleye Chop) that pushes your boat along. 10,15,20 The ability to see the dive curves as well as the scroll wheels would be nice for those of us used to the books and curve stickers. The drop off area following a rocky Point will likely not hold the same rocky cover. You are trying to cover a lot of water casting and searching for Walleyes when your jigging plastics. You tip your jig by the lips of your Minnow or the head of your Leech so they can panic lively as you fish. If you were to start with both the 6'6 M Combo and 6' ML Combo, I would recommend spooling up the most ideal line type for each form of presentation. away from the sinker and snap. Generally, the best time to fish for Walleye is early morning and late evening. The challenge and their delicious fillets kick thousands of anglers into gear. Finding them consistently in the Fall can be a challenge as they are moving throughout the water body fast, but once you find them the numbers will be countless. You need to put your bait and tackle to work with some classic techniques. Rocky Ledges? So in the Rocky Point example, Walleye will hold near the ledge and ambush Baitfish that mosey around near the end of the rocks. Target a 20 yard radius of uniform depth around the Structure you are fishing. Jig, drag, or swim these along the bottom. Red Octopus Hooks, Split Shot Sinkers and Walking Weights are all you need to get started. Alternate cadences and pauses, try a bunch of different actions but keep your lure in the strike zone a foot or two off the bottom. Size 6 is best used for Leeches and Flathead Minnows, a Size 1/0 is the standard for larger Shiners. Anchor up and keep moving to new locations until you start getting bites. Jigging PlasticsIdeal for Rivers with strong currents or actively searching for revved up Walleye in the Fall. Use a 1/4 Oz. for most situations in the beginning. PTD, (website, Facebook, YouTube, Facebook, YouTube, Facebook, YouTube, Facebook, YouTube, Facebook, Instagram), TheNext Bite (Gary Parsons website, Facebook, YouTube, Facebook, YouTube, Website, Facebook, YouTube, YouTube, YouTube, YouTube, YouTube, YouTube, YouTube, Live Bait and Artificial directly to your Mono. The difference between a bite and the ticks is a tap-tap feel rather than the gradually pull or rolling of the rocks against your Sinker. Float Drifting Drifting a Slip Bobber is the best beginner option year round. A deep diving Crankbait that drives 10-13 Ft. down is required to reach typical Walleye depths, a #8 in Firetiger is my favorite. Walleye are covering a lot of water in the Fall, and school tightly to large packs. Speeds closer to 1 MPH is common for spinner rigs. Your plastic should be fully secured, covering the barb, and the shank should be long enough to exit the plastic with a gap long enough to get a good hook set. Look for larger Cover that expands across Structure such as emerging weeds that cover an entire Flat or rock piles surrounding a Point. You want the Minnow's so nimble that they can escape the Walleye's snatch. In Summer, if I can find a deep school of Shad or Cisco, I will thump a Paddle Tail along the bottom. For beginners, I recommend a 3" Grub. So on the 100+ cast days I would prefer to have Braid + Fluoro Leader on the 6'ML Combo. Start targeting them with live bait and get some fish on the boat. They are picky and many of the slow days are out of your control. I can't make Walleye fishing easy, but I can make it easier for you to start fishing Walleye. There is a time and place for Crankbaits and Soft Plastics, albeit these are typically more advanced and are generally used to weed out the eater Walleye and target trophies. We've made countless YouTubes on the subject and writtencountless blogs and articles. You will find wehave covered every topic imaginable. If you are looking for something inparticular, just reach out. Best fishes, Mari Romanack, co-owner#FishingInfo #divecurve #precisiontrollingdata #divingdepths #depthdata #trollersbible ... Align your tackle selection to the water characteristics you have identified and execute the following techniques accordingly.28" Walleye caught off a Slip Bobber RigJigging Live BaitJigging is the act of presenting your bait near the bottom through lifts, drops and pauses to entice a bite. Unlike Bass and Crappie, Walleye do not guard their eggs so targeting them in Spawn is less effective. Thread the Bead, then the Float and tie on your Hook. If you can afford to own both, you can execute two approaches with ease. This in-depth article is curated for folks who understand the basics of fishing and would like to learn how to fish for Walleye. Cast 5-10 yards away from the boat and let the chop drift your Slip Float through the target area. Once again Chartreuse is my go to, but I like to use White jig heads on Swimbaits in Pearl to match the Baitfish as closely as possible. Walleye Fishing RigsWhether drifting by boat or casting off the dock, Walleye Rigs are next in your line up. Flats are generally long areas at a similar depth that maintain a bottom substance different from the majority of the lake. Feel along the bottom, letting your walking weight tick against the rocks. It's not weedless, but it gets your bait swimming just above the bottom, 2-3 ft. Walleye can be a challenging fish to target, but that's what makes them so enticing. This is just a rule of thumb, there are tons of specialty Jigs out there and manufacturer's size the ratio of weight to hook shank differently. I just wish they would add crankbaits more often and with different lines. Trolling is typically executed with planar boards to spread your offerings out and away from noisy motors. Use the Medium Light power for live bait. During the Mayfly Hatch when Baitfish are near the surface I will swim the Shad through the upper half of the water column. Walleye navigate and hold according to structure. There is a ton of information availableon how we test devices and whataffects the diving depth of crankbaits. This example can be totally different depending on the location and water body. If you let out too much line after you reach bottom, the sharper angle will wedge your sinker into rocks. These are a great option in Walleye dominant bodies of water, however, in smaller bodies of water where Perch, Panfish and Bass populations are robust, your Leech will be the victim of theft. Fluoro. You want all the cards in your favor to start getting on fish. This way I can punch through the River's bottom debris while also presenting a pause with the tail lifted up. You're motor provides the momentum to your bait and you can cover expanses of water effectively. Walleye school, so unlike targeting a few Bass under dock cover, we are looking for large areas of Cover to support large schools of Walleye. The Point will support a Sand Bar. Often times, transitions in Cover occur where transitions in Structure happen. All three are methodically used to cover large expanses of water, but each tactic differs. Slip Bobber RigI highly recommend this set-up as the primary tactic for anglers just getting started on Walleye. These should be trolled along expansive Flats and Reefs during the summer months. Closer to Canada this is typically May/June and closer to the Lower Midwest it's April/May. The three most popular Walleye Rigs are the Slip Bobber Rig, and the Spinner Rig. Because of this lack of competition, precision trolling can get away with a limited line diameters and crankbaits offerings (covered brands are focused mostly on those that sponsor their fishing show). Walleye spread out and save their energy for survival during these less optimal water conditions. Bait your Hook, preferably a Red Octopus Hook, with a Minnow or Leech (#6 for Leeches and Flatheads, 1/0 for Shiners). When the shallow bar reaches the uniform structure of the lake, the Point often transitions into a ledge or drop off. Make sure you can feel bottom and bounce your jig along every 3-5 seconds, lifting up a foot, dropping it, then pausing on the bottom for a moment. Larger Females feed heavily in late Spring, about a month after spawning, to regain the weight they lost. A Point's shallow bar that transitions to a steep drop off greatly reduces the distance Walleye need complete their daily routine. Cast your Soft Plastics rigged to Jig Heads and try bouncing, dragging, and swimming them back along the bottom. A Sandy Beach? Then once winter comes around, it's time to ice fish for walleye and jig beneath the ice. Techniques on How to Fish for Walleye Now you know where the Walleye are and what tackle you need to catch them. Ideally there will be a Walleye Chop, or winds just strong enough to drive waves a little less than a foot high. I like to rip these upward and let them sink. Mono offers forgiving stretch, it's readily available and inexpensive. The worms top heavy design lets the tail end float up when sitting on the bottom. Pausing on the retrieve sparks the majority of my bites. This creates a very natural struggle as the Baitfish or Leech is treading against the slow drag. More advanced terminal tackle like Bottom Bouncers, Beads, Blades, Trolling Accessories etc. Thread the Slip Tie onto your line first and pull it in place. Anchor your boat and set your Slip Tie so your bait is a foot off the bottom and your Slip Float is upright. Our team uses our Multi-Species Combo as their primary rod and reel for most of our days on the water.6'6" Medium, Fast Action Spinning Reel - Compatible with all tackle and techniques discussed, ideal for Lures and Soft Plastics.6' Medium Light, Fast Action Spinning Rod + Size 30 (3000) Spinning Reel - Ideal for sensitivity, best used when jigging or rigging Live Bait. Fishing Line for WalleyesFor starting with only the 6'6" M Combo, I recommend spooling it with an 8 Lb. Monofilament. Let your line out and adjust the depth of the tie until your bait is a foot above the bottom and your Slip Bobber is upright. If the bite is slow and I am marking fish, or if I am going for eater sized eyes I will use Flathead Minnows (2-3"). Leaches & WormsThe second most popular option is Leeches, typically in the Large to Jumbo sizes. If you're interested in what our other experts have to say, here are some more walleye fishing tips. A hump is typically an oblong rise in depth, kind of like a sunken mound or hill. The spot-on-the-spot is typically the part of the lake or another structural feature. 26" Walleye caught off a Rocky PointFishing CoverThe stuff that provides shelter or shade within the body of water Trolling requires a boat and is somewhat advanced, but I recommend having a Crankbait in your arsenal if you are a shoreline angler. Beware, there will be a mixed bag of species in this approach. Adjust the depth as you cover more water, and don't let the rig float too far away or you're at the wrong depth. Slip Bobber Rig: Tie > Bead > Float > Split Shot Sinker > HookLive Bait RigWhen jigging is not producing this is a go to for rocky or hard bottoms. Tails tipped with Chartreuse in these colors are effective in stained water. Their internal feeding clock is ticking more actively during dawn and dusk regardless of light conditions during the day. A hole is a deep pocket of the lake, usually depressing in a circular shape with the deepest point in the center. Walleye Chop can move your boat along at about 0.2-0.4 MPH on good days. Let your line out next to the boat like you would jigging, keeping it only a few yards away from the boat. You can jig from dock or shore by casting and jigging your bait back on the retrieve. If Live Bait is not readily available or you're set on targeting trophies, then lures are the way to go. As we are co-owned by anglers there are several places tofind this information. Speeds between 1-2 MPH are common with Crankbaits. Many times dragging, swimming or regular jigging along the bottom is the ticket instead. Focus your efforts on locating Walleye according to structure and feeding habits. Shallow in Spring, Deep in Summer, Shallower in Fall. Temperature for Walleye activity. I sport both so I can easily switch between Live Bait and artificial, but I recommend getting started with the 6'6" Medium for learning how to fish for Walleye. On the 6'6" Medium for learning how to fish for Walleye activity. I sport both so I can easily switch between Live Bait and artificial, but I recommend getting started with the 6'6" Medium for learning how to fish for Walleye. On the 6'6" Medium for learning how to fish for Walleye activity. I sport both so I can easily switch between Live Bait and artificial, but I recommend getting started with the 6'6" Medium for learning how to fish for Walleye activity. I sport both so I can easily switch between Live Bait and artificial, but I recommend getting started with the 6'6" Medium for learning how to fish for Walleye activity. I sport both so I can easily switch between Live Bait and artificial started with the 6'6" Medium for learning how to fish for Walleye activity. I sport both so I can easily switch between Live Bait and artificial started with the 6'6" Medium for learning how to fish for Walleye activity. I sport both so I can easily switch between Live Bait and artificial started with the 6'6" Medium for learning how to fish for which the fish for w Combo, I spool the main line with 10 Lb. Braid and tie on a 12 Lb. Fluorocarbon leader. I recommend starting out with Live Bait, either jigging or rigging, to get your hands on some fish first. Here are some of the most historically popular lure options for Walleye. Crankbait, Grub, Paddle Tail Shad, and Ring WormCurl Tail GrubsThe best Walleye lure of all time, Grubs on a Jig are the most popular alternative to Live Bait. Keep them a foot above your Hook as they serve an important purpose in your Live Bait's presentation. As water temps begin to drop in the Fall, Walleye sense the urge to bulk up for Winter. Other types of shoreline that indicate structure are turns, bends, and mouths of bays or creeks. Examples of Fishing Structure Mid-lake structure requires access to a vessel. Minnows and Leeches can be jigged, rigged, or floated on a Slip Bobber. Drifting Live Bait is ideal for lethargic Walleyes in early Spring Spawn, or when poor conditions leave Walleye timid during Late Spring and Early Summer. I am going to walk you through what bait & tackle to use when fishing for Walleye, where to find them, and how to use popular techniques to catch Walleye are generally more finicky and complicated to catch versus the typical Freshwater fish. Add a #7 Split Shot about a foot above the hook, and clip the ends of the Slip Tie down. Jigging from shore can be challenging if you have to much vegetation, revert to a Slip Bobber if jigging ends in countless weeds. Drifting This is the method used to drag Live Bait Rigs along the bottom. Full Nightcrawlers are typically saved for spinner rigs but can also be a great float option. For more information on how to use live bait in various Freshwater fishing scenarios check out our post Live Bait Fishing. Walleye, we will cover this tactic in more detail near the end. Typically shoot for rocky or sandy bottoms, or alongside the weedline when fishing on shore. This is a classic approach, but I like to use 2 x #6 Baitholders to harness my worm, elongating it while covering up as much Hook as possible. When these winds are a bit stronger, use a drift sock to slow the roll. Here are some generalities so you have a frame of reference. The rod should be Fast Action either way, I highly encourage a \$59.99-\$79.99 budget. While Snap Swivels make it easy to switch baits, do not use them directly on your main lure. As you go more often you will cover most of the scenarios and are an essential component to your Slip Bobber Rig. Rigs are typically the default when the Walleye bite is timid and jigging presentations are too aggressive. Learning how to catch Walleye is a life long pursuit. Think of rolling hills underwater. The Split Shot will give enough pull to stand your Bobber upright and reduce the tension needed for Walleye to take the bait. Keep moving and searching, check out In-Fisherman's Article for more advanced techniques and plastics. Trolling Best performed on Flats with uniform depth, trolling can return Walleyes on Offshore Reefs during the summer and near shore Mudflats during the Fall Mayfly Hatch. Walleye are generally deeper than 10 Ft., so locating them has a lot to do with your understanding of whats going on underneath the water. Split Shot weights keep your Minnow or Leech in place so they don't duck behind cover. Snap Swivels These are an essential component for Live Bait and Spinner Rigs because they secure your leader to the main line and allow the rig to rotate without twisting the main line. Let the wind or current take your float, which will gradually drift your bait over a greater area. so your lures can be frustrating. Early and late hours are a great opportunity for shoreline and dockside anglers to have a shot at the marble eyes. Seasonal Walleye HabitsIn early Spring, Walleye are spawning when water temps reach 40 degrees. This mold condenses the exposure of the jig + hook, giving your Live Bait a covert presentation. A 5" Chartreuse Ring Worm on a 1/4 Oz.-1/2 Oz. Jig sends rippling vibrations to spark the interest of the Walleye's lateral lines. If you are balling them up you can get away with a single #2. Live Bait is the best option when you're first learning how to catch WalleyeMinnows (Shiner), Nightcrawlers and Leeches are the most common Live Bait for WalleyeMinnows (Shiner), are first learning how to catch WalleyeMinnows (Shiner). Walleye are generally caught between 10-40 Ft. A typical mid-sized lake in the Midwest would likely hold Walleye between the depths of 10-15 Ft. during Summer and back to 15-25 Ft. in the Fall. I mean why is that? This approach if most effective during Spring, when Walleyes are actively feeding on condensed structure like Points. Walleye can feed in the rocky, sandy, or grassy shallows during the dusk and dawn feeding hours, then swim a few yards away to position themselves along the deep drop off during their low light preference of mid-day. Added hardware is disturbing and reflects light, reserve Snap Swivels for rigs with leaders. All the Walleye Fishing Tackle discussed here is available in our Walleye Fishing KitWhere to Fish for Walleye scondensed in the shallows during low light vs. On larger bodies of water trolling over Reefs and Flats are good options. Light ConditionsWalleye have a high sensitivity to light. They will also catch a fair share of Pike and Bass which makes for exciting evenings on the dock. Ring WormsKnown for their effectiveness in Rivers, the vibrating ring worm is a go to for big Walleye in fast moving current. Experiment until you spot a pattern. Paddle Tail ShadsI like to use Shads when I can locate schools of Baitfish. Try both approaches. Walking WeightsThese shoe shaped Sinkers let your rigs drag across the bottom at a reduced rate of snagging. When the sun is high at midday, Walleye move deeper and hold tightly to shade providing Cover. These are usually trolled with a Bottom Bouncer in 1-2 Oz. at speeds ranging from 1-2 MPH. can be put on hold until you get your licks in with everything I'm covering here. Baitholder Hooks, Octopus Hooks are the standard for Walleye fishing with Leeches and Minnows. Continue to rotate around your boat covering the drifts. Edit: Crashes have been fixed with recent app update. Common 1/4 Oz. Jigs are typically sized for 4-6" Soft Plastics, and 1/8 Oz. are sized for 2-3". Points on the shoreline are the most popular referrers to classic Walleye structure. Lakes heat up first on the Northern side and hardbottom areas will be the warmest. The Walking Weight (1/4-1/2 Oz) is molded so it slides over and around rocky crevasses. We want to help you understand the sciencebehind testing crank baits and how toachieve what depth you need. If you want to fish fast and avoid keeping bait alive this is your primary option. The later is my recommendation, I like a Perch color blade for clear water and an Orange blade for stained. A typical Medium Power 6-7 Ft. spinning rod and a medium sized 35 reel will give you versatility to fish many of the popular Walleye techniques. Grubs are great options off the dock or on the boat, and they let you cover more water than Live Bait as you're able to cast and retrieve more frequently without jeopardizing the liveliness of your Minnow. When targeting bigger fish, Shiners in the 4-6" range are the mainstay, these will weed through some of the smaller fish and get you on 25" + Walleye. Points are where shallow water protrudes out into the lake, often bringing with it whatever makes up the shoreline. Getting the attention of Walleye in stained, fast moving water can be challenging. Once located, focus on areas where Cover is transitioning, like the edge of a weedline. The Point will often support a rock pile. During periods of low light however, Walleye will move in shallow to feed on baitfish holding close to shore. It's also great for fishing in a large group. If there is no chop, utilize a Trolling Motor on low to get the same effect. Generally target depths of 10-15 ft. Identifying structural transitions is most often the key to finding Baitfish and their ensuing Walleye are hungry after the spawn, and the water around Points have heated up. Structure can be broadly defined as a-typical, or ideal areas of the water body's floor that transition in depth or consistency from the general make up of the lake. Fluoro has no stretch so you can accurately judge bites, and it is virtually invisible underwater. However, bait rigged for jigging will not cover up the typical Barbed-Jig's shank so, Fireballs are the best option. Hot water temps and bright light are going to push Walleye deep, so targeting mid-lake structure like Holes and the Saddles of Humps are a go to on small to mid-sized lakes. Walleye will be spawning but not all at once so try to target just outside of Northern bays and inlets to find Walleye's making their way out from spawning 75-80 Degrees is the typical range for summer doldrums. Flats, holes, humps, saddles and sunken islands are a few examples mono-leader to your Hook. I recommend 1/4 Oz. and 1/8 Oz. for most circumstances, you will rarely need anything larger and anything smaller is going to be ineffective in the typical walleye depth range of 15-30 Ft. Chartreuse is my go to color for Live Bait jigging, however I always have some glow colors as well for late evening and night bites. Barbed Jigs (Right) Barbed Jigs this laughable patent gets tossed. It will be most effective in Spring and Fall when you locate a school, but Float Drifting will also work during the most natural presentation, while still covering water. It was granted for "marine electronics with lure depth analyzer" what a joke!! Perhaps one day it will be challenged and tossed out so that this app will improve in order to compete in an open market. This can be true for Nightcrawlers as well, however rigging them to worm harness spinners lengthens their profile which sorts through the pests. If jigging from a boat, keep your bait right in front of you, this way you can accurately gauge your relation to the bottom as your boat drifts or slowly trolls over an area. If no chop is available, use a Trolling Motor at the lowest setting, or cast and retrieve. Live Bait Rigs (Above), Spinner Rigs are beaded blade rigs that can sport a single hook for trolling Minnows and Leeches, or a double-hook harness to sport a full Nightcrawler. In my experience, Braid has offered a smoother, more accurate cast vs. This range typically occurs during the transition from Spring to Summer. The Summer Slump is a result of less active feeding due to a surplus of Baitfish and spreading out across mid-lake. Barbed Jigs are commonly used for all Freshwater species, their size should correspond to the Soft Plastics you are using. The Live Bait Rig is a Walking Weight above a Snap Swivel which runs a 2-4 ft. Many of these techniques produce about a foot or so off the bottom. Crankbaits Walleye Crankbaits are predominantly known for their trolling applications, typically behind planar boards to spread multiple lures apart and to avoid the commotion generated from the boat and motor. This is what you will primarily tie onto your Slip Bobber Rig. These lures are great for searching out Walleye, then alternating to a more targeted approach, like a Slip Bobber Rig, once you can zone in. Finding structure that holds Cover will increase your chances of finding fish. If you have never fished before I highly recommend starting with Fishing for Beginners. Walleye Rods & Reels A solid spinning combo is your first purchase to start fishing Walleye. An example would be a Mud Flat that ranges 10-13 Ft deep and spans a quarter mile. For Walleye this typically means weedlines, rocks and boulders located in accordance with a structural feature. To jiq you will need jig heads. I really like 4", but in the early stages you're going get lot more action on a smaller profile that's just long enough to ward off Panfish. I don't want you to feel like you're out of the loop after reading this, but depth is subjective to the body of water. For jigging live bait, it is critically important to use Fireball style jigs.
